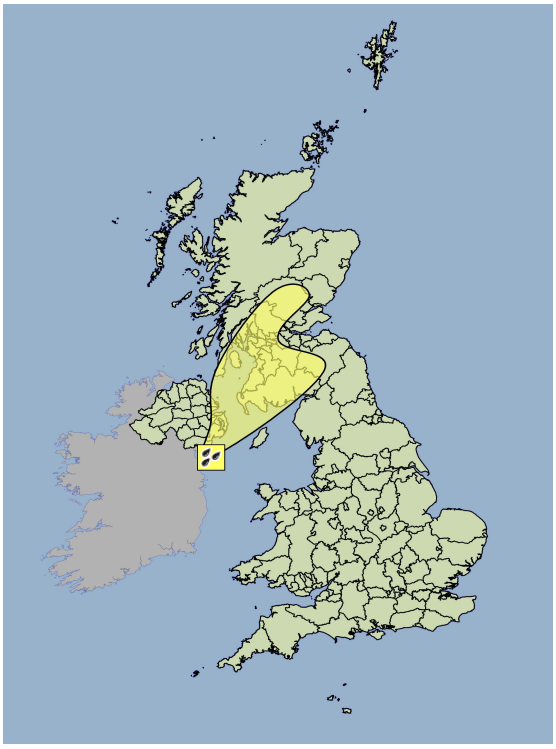
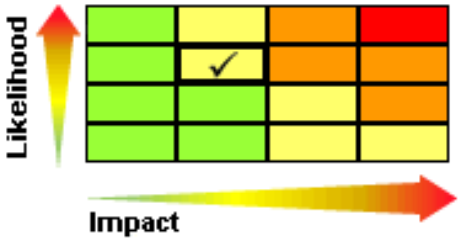
National Severe Weather Warning Service





Chief Forecasters Assessment
Tuesday's weather system is not expected to bring the amounts of rain that have been seen recently. Nevertheless, given saturated ground and accumulations of 10-15 mm in places, (perhaps around 20 mm on high ground), some further minor flooding impacts seem likely. Coupled with winds gusting to around 50 mph, some unpleasant travel conditions, but fortunately the worst out of the way well before evening.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **03:00 on Tue, 31st Dec 2013** until **12:00 on Tue, 31st Dec 2013**

A further squally band of rain will spread from the southwest from the early hours of Tuesday morning in Northern Ireland, clearing eastern Scotland around the middle of the day.

The rain will be heavy for a time, and following on from recent very wet weather, the public should be aware that this could lead to further localised flooding.
